----- *User Stories* ----- ----- ----- ----- -----

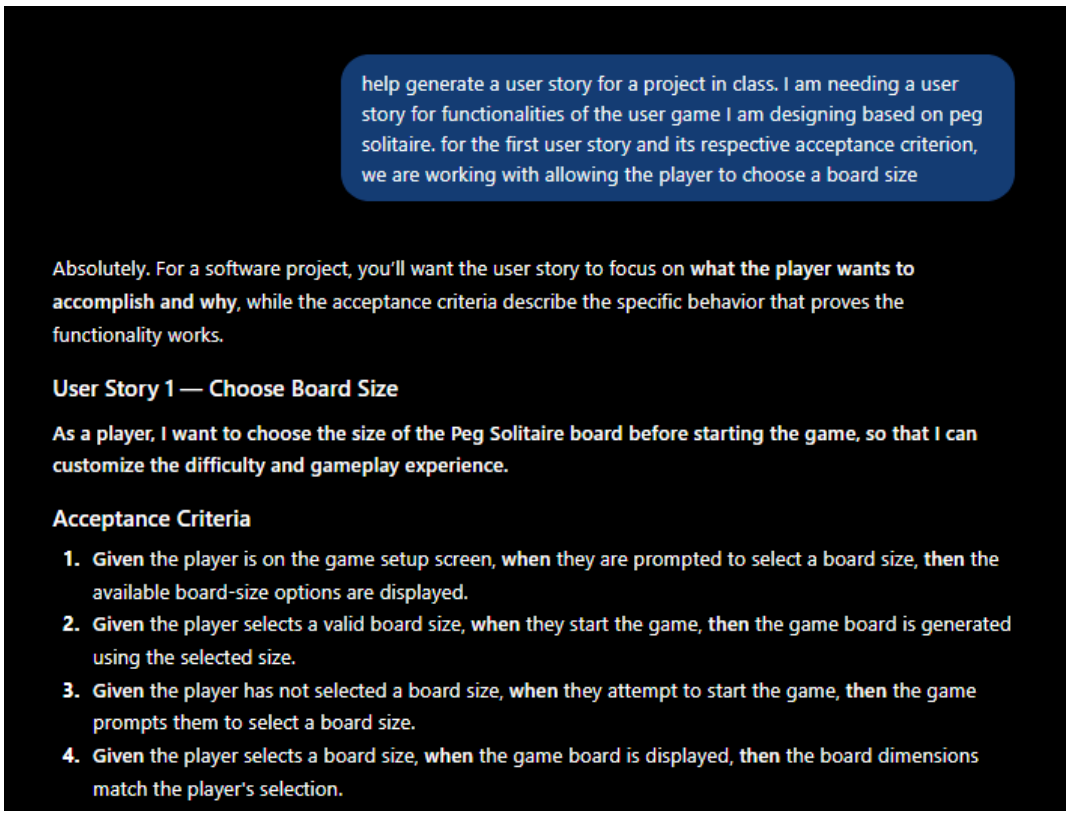

1. Choosing Board Size

➔ LLM Prompt
- ◆ "help generate a user story for a project in class. I am needing a user story for functionalities of the user game I am designing based on peg solitaire. for the first user story and its respective acceptance criterion, we are working with allowing the player to choose a board size"

➔ LLM user story
- ◆ "As a player, I want to choose the size of the Peg Solitaire board before starting the game, so that I can customize the difficulty and gameplay experience."

➔ Altered LLM user story
- ◆ LLM was told that needing to customize difficulty was unrelated to the user story. The updated user story is as follows.
- ◆ "As a player, I want to choose the size of the Peg Solitaire board before starting the game, to create a customizable gameplay experience."

➔ Screenshot

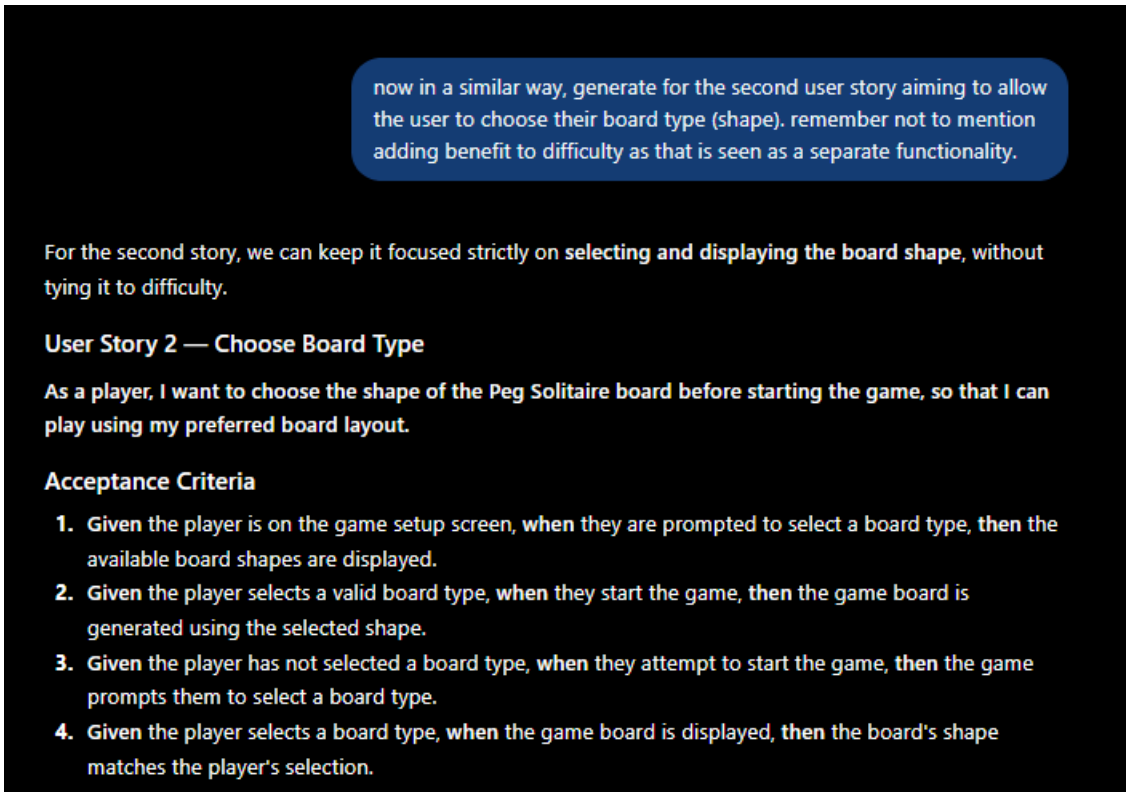

2. Choosing Board Type

➔ LLM Prompt
- ◆ "Now in a similar way, generate for the second user story aiming to allow the user to choose their board type (shape). Remember not to mention adding benefit to difficulty as that is seen as a separate functionality."

➔ LLM user story
- ◆ "As a player, I want to choose the shape of the Peg Solitaire board before starting the game, so that I can play using my preferred board layout."

➔ Screenshot

3. Starting new game

➔ User Story
- ◆ As a player of the game, I want to start a new game using my selected board size and type so that I can *continue* playing with my chosen configuration.

4. Making a move

➔ User Story
- ◆ As a peg solitaire player, I want to make a move by choosing a peg and moving it to a different, valid location, so that I can play the game according to the rules of peg solitaire.

5. Checking if the game is over

➔ User Story

◆ As the game, I want to determine when no valid moves remain, so that I can recognize when the current game has ended.

User Story	Priority	Estimated Effort
Choosing Board Size	4	1 hr
Choosing Board Type	5	1 hr
Starting New Game	3	0.5 hrs
Making a Move	1	3 hrs
Checking if Game is Over	2	2 hrs

----- *Acceptance Criteria* ----- ----- ----- ----- -----

1. Choosing Board Size ***Status → In progress***

➔ LLM Acceptance Criteria from original prompt (see SS)

◆ **Given** the player is on the game setup screen, **when** they are prompted to select a board size, **then** the available board-size options are displayed.

◆ **Given** the player selects a valid board size, **when** they start the game, **then** the game board is generated using the selected size.

◆ **Given** the player has not selected a board size, **when** they attempt to start the game, **then** the game prompts them to select a board size.

◆ **Given** the player selects a board size, **when** the game board is displayed, **then** the board dimensions match the player's selection.

2. Choosing Board Type ***Status → In progress***

➔ LLM Acceptance Criteria from original prompt (see SS)

◆ **Given** the player is on the game setup screen, **when** they are prompted to select a board type, **then** the available board shapes are displayed.

◆ **Given** the player selects a valid board type, **when** they start the game, **then** the game board is generated using the selected shape.

◆ **Given** the player has not selected a board type, **when** they attempt to start the game, **then** the game prompts them to select a board type.

◆ **Given** the player selects a board type, **when** the game board is displayed, **then** the board's shape matches the player's selection.

3. Starting a new game (same board size/type) ***Status → In progress***

   ➔ Acceptance Criteria
   - ◆ Given the player has selected a board size and board type when they choose to start a new game, then a new game board is created using those selections.
   - ◆ Given the player starts a new game when the board is displayed, then the board matches the selected size and type.
   - ◆ Given a new game has been started when the board is initialized, then the board is set to its default starting state.
   - ◆ Given the player is currently playing a game when they choose to start a new game, then the current game is cleared and a new board is initialized using the selected size and type.

4. Making a move in the game ***Status → In progress***

   ➔ Acceptance Criteria
   - ◆ Given the player selects a peg, when they select a valid destination, then the peg moves to the selected location.
   - ◆ Given the player makes a valid move, when the move is completed, then the jumped peg is removed from the board.
   - ◆ Given the player makes a valid move, when the move is completed, then the board reflects the updated positions of the pegs and empty spaces.

5. Checking if the game is over ***Status → In progress***

   ➔ Acceptance Criteria
   - ◆ Given the game is in progress when the game checks the current board, then it determines whether any valid moves remain.
   - ◆ Given no valid moves remain when the program checks the board, then the game is identified as over.
   - ◆ Given at least one valid move remains when the game checks the board, then the game keeps going.
   - ◆ Given the game is identified as over when the game checks for available moves again, then no additional moves can be made.
