Sprint 2 - Jack Burnos

Github Link: https://github.com/burnoj333/Jack-Burnos-Peg-Solitaire-Fall-2026.git
Video Link: https://youtu.be/dIEVbaYFILg (sorry for jump scare at the end)

Summary of source code

- gameLogic.py
  - production code/logic for the game rules.
  - Handles making moves / checking if the game is over/won, etc.
  - **112 lines**
- mainUnitTesting.py
  - test code where I did unit testing for some of the logic implementation for gameLogic.py
  - **83 lines**
- UserInterface.py
  - is where I wrote all code for all UI aspects
  - Works in tandem with a PegSolitaire object
  - **85 lines**
- mainGame.py
  - Where unit testing and game objects are called
  - **21 lines**

Production Code vs User Stories

- Choosing board size
  - Need to add a point to ask user for board size somewhere at beginning of game initialization in the game class
  - *Was not implemented in this sprint, moved to sprint 3*
- Choosing board type
  - Implemented in pegSolitaire class as an attribute at initialization
  - UI gathers users choice in UI file's UI class, feeds to game object
  - *Completed 2 / 3 board types proper implementation (not triangular)*
- Starting new game
  - Implemented in both UI class and game class where board is reset to default using similar initialization calls to board type. Board displayed again with ui.display_board()
  - *Works fully to completion*

- Making a move
    - Move function is a method of game class.
    - With board as a parameter, it checks if a move is valid using game.is_valid_move() and updates board accordingly
    - *Works on 2 / 3 of the board types (not triangular)*
- Checking if game is over
    - After each method call of the move method, the board is checked to be out of moves and checks for a win using game.is_game_over() method. Outputs are given based on this logic
    - *Logic is completed for this check, output implementation not polished*

Tests vs User Stories

4.1 - Generating unit tests for is_game_over( ) method and move( ) method similar to ones I wrote myself

4.1 - My test cases

Found in Sprint 2 github folder in mainUnitTesting.py

4.2 - Not Applicable
4.3 - Not Applicable
